Professional dishwashers with steam recovery system

The **STEAM RECOVERY SYSTEM (S.R.S.)** allows the total elimination of steam at the end of the wash cycle, keeps the workplace healthy and prevents the operator from continuously breathing the substances contained in the detergents. It also ensures the absence of fumes after opening.

Our steam recovery system needs to be connected to the cold water and not to the hot water produced by external heat sources. The cold water sent into the condensing device allows the steam generated by the rinsing cycle to be absorbed and eliminated quickly.

The main ADVANTAGES:

- No steam when opening the door / hood at the end of the cycle
- Maintaining a healthy workplace
- Dishwasher connection with cold water
- Energy savings thanks to water pre-heating
- System fully integrated in the dishwasher
- No external extractor hood required
