THE DEAD SEA

One of the natural wonders of the world is the Dead Sea, which is 1,200 feet below sea level. Over millions of years, the hot dry air and high evaporation rate has contributed to the high salt concentration present in the Dead Sea, making it one of the saltiest lakes in the world.

Compared to the 3% salt content of ordinary seawater, researchers claim that the Dead Sea water contains 32% salts with relatively high the concentration of 21 minerals such as magnesium, calcium, bromide and potassium. Twelve of these minerals are not found in any other sea or ocean.

We have created the ultimate equation for treating fur and pet skin. The mineral composition in our top leading products comes from the Dead Sea treasures. We harnessed the wonders of the Dead Sea in combination with natural active ingredients, oils, and extracts, providing an unprecedented and extremely effective treatment for fur and skincare. The product has been carefully designed especially for our precious pets.
